

POC.OPERATION - Target Architecture

One operating system connecting people, revenue, delivery, finance and governance

01

Entry, Sign-in and New Employee Application

Real user journey from public entry to authorized workspace

02

Organization & Identity Architecture

One person, one identity; responsibilities and assignments are separate

03

GANESH - ONE IDENTITY

Primary: Lead Generation Intern
Primary Team: Revenue Pod 2 - Growth/New Business
Additional: CEO Desk support
Permissions remain explicitly scoped

JASON - ONE IDENTITY

Primary: Lead Generation Intern
Primary Team: Revenue Pod 1 - Existing Accounts
Additional: CEO Desk support
Permissions remain explicitly scoped

DATA MODEL

Employee
Primary position
Primary team
Additional responsibility
Assignment

Revenue Pod 1 - Existing

Sonal A.
Senior Revenue Lead
Pratiksha Kacha
Client Servicing Manager
Jason
Lead Generation Intern
Client Servicing / BD
Vacant

Revenue Pod 2 - Growth

Neha Mayekar
Deputy Growth Revenue
Ganesh Sanap
Lead Generation Intern

Operations

Harsh Aswale
Manager Operations
Deepak
Junior Operations

Shared Services

Vedika
Vendor Procurement
Gautam
Vendor Procurement Intern
Shweta
Finance / Accounts
3D / Graphic Designer
Pending

Business Head

Luvneet A.
Business Head

Shared Page Architecture

Every role uses one consistent shell; workspace content changes by responsibility and scope

04

Dashboard

System health
workforce count
registrations
shortcuts

Team Tasks & Operations

Company-wide task view
filters by team/employee/status
SLA + verification + evidence

Workforce Directory

Employees
position/team
status
profile + authorized documents

Registration Queue

Pending applications
review
approve/reject
role + department assignment

Departments & Designations

Master setup
active/inactive
position structure

Roles & Permissions

Roles
permissions
scopes
overrides

System Settings

System configuration
automation settings
security/system controls

Clients

Client master
ownership
classification
status

Automation

Rules

Issues & Audit

Issue register

ADMIN CONTROL MODEL

System control $\neq$ business decision rights. Admin can manage configuration and authorized company data; Business Head/CEO retains strategic business authority.

Role-Based Workspaces

Same platform, different operational cockpit for each role

06

Business Head / CEO

Executive Command Center
Revenue + pipeline
People + clients
Projects + operations
Finance + collections

Senior Revenue Lead / Client Servicing Manager

Team Operations
Clients
Pipeline
Tasks + verification
Daily reports

Revenue Pod Member

Revenue cockpit
My tasks
Clients
Opportunities
Follow-ups

Manager Operations

Operations Command Center
Projects + milestones
Vendors
Operations tasks
Delays / SLA

Finance / Accounts

Finance dashboard
Invoices
Collections
Ageing
Finance tasks

Employee / Intern

My work
My tasks
Assigned clients
Assigned opportunities
Daily work report

COMMON BUSINESS SPINE

Client → Opportunity → Activity → Proposal → Project → Execution → Invoice → Collection → Revenue
Tasks/Governance cross-cut the spine through Maker-Checker + Evidence + SLA + Audit

Technical Architecture & Data Flow

Where each technology fits and how a request moves through the system

07

Workflow	Primary UI	Backend entry	Data table	Expected outcome
Employee registration	New Application	POST registration	registration_requests	PENDING request appears in Admin Queue
Task assignment	Team Operations	POST manager task	tasks + audit	Manager + assignee see task after refresh
Client creation	Client Accounts	POST clients	clients	Created client appears and persists
Opportunity	Deal Pipeline	POST opportunities	opportunities	Opportunity appears in correct scope
Project	Projects	POST/PATCH project	projects + milestones	Operations sees project lifecycle
Invoice/payment	Finance	POST/PATCH finance	invoices + payments	Ageing/outstanding recalculates
Delay	Delay Requests	POST/PATCH delay	delay_requests + tasks	Original date preserved; revision governed

Definition of Done - Review Gate

What must be true before the system is considered ready for real operational use

09

Identity

One person = one account
roles + teams + responsibilities
separated
real-data fields only when known

Navigation

Every workspace is genuinely distinct
sidebar state synchronized
refresh preserves current workspace

Backend

Every mutation persists to D1
protected routes enforce auth +
permission + scope
frontend never bypasses backend

Performance

Initial shell loads quickly
no large unnecessary data fetches
parallelize independent queries
measure before/after

Governance

Maker-Checker blocks self-approval
original deadline immutable
delay approval preserves audit

Automation

Central runner
configurable schedules
correct recipients
idempotent execution
run history

Data

No fake operational records
master-data uniqueness
relationships are explicit
historical data distinguished from live

Security

Private R2 documents
safe cookies/sessions
IDOR protection
audit sensitive changes
negative authorization tests

REVIEW SEQUENCE

1. Business structure → 2. Pages/workspaces → 3. APIs/data → 4. Automation → 5. Performance → 6. Security → 7. End-to-end browser verification → 8. Real-data onboarding
